# GrapheneOS

- Restore SeedVault Backup

# Restore SeedVault Backup

This guide assumes you have been backing up your GrapheneOS using SeedVault in a WebDAV mount that you mounted using DavX5.

- After initial setup, install DavX5 and re-mount the original WebDav share you previously used to perform the backups.
- In your phone dial pad, dial **\*#\*#7378673#\*#\*** in order to bring up the SeedVault restore screen.
- Enter your SeedVault Recovery Seed words and pick the backup you wish to restore.
