General

Login to webmail

This mailbox user has **direct, external access** to the following protocols and applications. This setting is controlled by your administrator. App passwords can be created to grant access to individual protocols and applications.
The "Login to webmail" button provides single-sign-on to SOGo and is always available.

IMAP ✓ SMTP ✓ Sieve ✓ POP3 ✓ SOGo ✓

✏ Change password

- In the **Change Password** window enter your NEW password in the first field, repeat the NEW password in the second field, enter your OLD password in the third field and click the **Change password** button. It's highly recommended to click on **Check against haveibeenpwned.com** after you entered your password in order to ensure the password you are attempting to use has not been compromised in previous data breaches. Alternatively instead of specifying your own password you can click on the **generate** link and have the system generate a password for you (**Figure 3**).
