

Install Zabbix Agent Ubuntu

Ubuntu 22.04

```
wget https://repo.zabbix.com/zabbix/5.0/ubuntu/pool/main/z/zabbix-release/zabbix-release_5.0-2+ubuntu22.04_all.deb
```

```
dpkg -i zabbix-release_5.0-2+ubuntu22.04_all.deb
```

```
apt-get update
```

```
apt-get install zabbix-agent
```

Ubuntu 20.04

```
wget https://repo.zabbix.com/zabbix/5.0/ubuntu/pool/main/z/zabbix-release/zabbix-release_5.0-1%2Bfocal_all.deb
```

```
dpkg -i zabbix-release_5.0-1+focal_all.deb
```

```
apt-get update
```

```
apt-get install zabbix-agent
```

Ubuntu 18.04

```
wget https://repo.zabbix.com/zabbix/5.0/ubuntu/pool/main/z/zabbix-release/zabbix-release_5.0-1%2Bbionic_all.deb
```

```
dpkg -i zabbix-release_5.0-1+bionic_all.deb
```

```
sudo apt update
```

```
apt-get install zabbix-agent
```

Configure Zabbix Agent for Passive Checks

Edit the zabbix configuration file:

```
sudo vi /etc/zabbix/zabbix_agentd.conf
```

Set the following parameter according to your environment:

```
Server=192.168.100.51
```

save the file and close

Restart and enable zabbix agent service

```
sudo systemctl restart zabbix-agent
```

```
sudo systemctl enable zabbix-agent
```

Start/stop/check status of zabbix agent service:

```
sudo systemctl start zabbix-agent
sudo systemctl stop zabbix-agent
sudo systemctl status zabbix-agent
```

Configure Zabbix Agent for Active Checks

Edit the zabbix configuration file:

```
sudo vi /etc/zabbix/zabbix_agentd.conf
```

Set the following parameters according to your environment:

```
ServerActive=192.168.100.51
Hostname=zabbix.fosstechnix.local
```

save the file and close

Restart and enable zabbix agent service

```
sudo systemctl restart zabbix-agent
```

```
sudo systemctl enable zabbix-agent
```

Start/stop/check status of zabbix agent service:

```
sudo systemctl start zabbix-agent  
sudo systemctl stop zabbix-agent  
sudo systemctl status zabbix-agent
```

Configure TLS with PSK

Edit the zabbix configuration file:

```
sudo nano /etc/zabbix/zabbix_agentd.conf
```

Set the following parameters where **unique_psk_identity** is some unique value for the agent you are configuring. It can be anything as long as it's unique for this host:

```
TLSConnect=psk  
TLSAccept=psk  
TLSPSKIdentity=unique_psk_identity  
TLSPSKFile=/etc/zabbix/zabbix_agentd.psk
```

save the file and close

Run the following command to generate a psk file using the path and name specified in the **TLSPSKFile** parameter from above:

```
openssl rand -hex 32 | sudo tee /etc/zabbix/zabbix_agentd.psk
```

Note the generated random string as you will need it to configure the agent on the Zabbix server under the **Configuration --> Hosts --> Host --> Encryption** tab.

Start/stop/check status of zabbix agent service:

```
sudo systemctl start zabbix-agent  
sudo systemctl stop zabbix-agent  
sudo systemctl status zabbix-agent
```
